Question 2:

< ----- (Form.html) ---- >

```html
<!DOCTYPE html>
<html>
 <head>
  <title>Fall-18  QUESTION:2</title>
  <style>
  .header{
   text-align: center
   }
  .area{
   width: 300px;
   margin: 0px auto;
   border: 2px ;
   padding: 30px;
   }
</style>
</head>
 <body>
  <div class="header">
   <h1>Calculate Area of Parallelogram </h1>
  </div>
  <div class="area">

  <form>
   <p>
    Width <input type="text" id="width">
    <br><br>
```

Height <input type="text" id="height">

</p>

Area <input type="text" id="area">

<input type="button" id="area" onclick="calculateArea()" value="calculate">
</form>

<!---Main solution of question ----->
<script>

```
function calculateArea(width, height)
{
 ///The document.getElementById()method returns the element of specified id.
  width = document.getElementById("width").value;
  height = document.getElementById("height").value;
  var area = width * height;
  document.getElementById("area").value = area;
}
```
</script>

</div>
</body>
</html>

Question 3:

< ------ **Into.html** ------- >

<!DOCTYPE html>

```
<html>
 <head>

  <title>Fall-18 QUESTION: 3</title>
  <style>
                    .message{
                            width: 300px;
                            margin: 0px auto;
                            border: 2px solid red;
                            padding: 30px;
                    }
            </style>

 </head>
 <body>
  <div class="message">

  <form  action="welcome.php" method="post">
    Name: &nbsp <input type="text" name="name"><br><br>
    E-mail: <input type="text" name="email"><br><br>
